## **DETAILED ACTION**

Acknowledgement is made of Applicant's IDSs received 7 May 2004 and 13 December 2004.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2, 3, 5, 10-14 are rejected under 35 U.S.C. §102(b) as being anticipated by Radwan et al. (New Forests vol. 3; document 21 on Applicant's IDS received 7 May 2004).

As to Claims 1 and 13, Radwan et al. disclose a method for promoting growth of shoots ("vigorous new shoots" of top page 23) comprising applying fertilizer solution ("intermittent overhead mist" of 2<sup>nd</sup> para. of page 24) that comprises less than about 0.01% (w/v) nitrogen (in that mist is water which would contain less than about 0.01% (w/v) nitrogen) from an Alder log (defined as "younger trees" of top of page 23) sufficient to promote growth of shoots from the log (see abstract).

As to claim 2, Radwan et al. further disclose the solution not containing any nitrogen (in that the water used for misting plants contains not nitrogen unless contaminated).

As to claims 3 and 5, Radwan et al. further disclose the solution an intermittent mist (from page 24, 2<sup>nd</sup> para.).

Application/Control Number: 10/727,446

Art Unit: 3643

As to claims 10-12, Radwan et al. further disclose harvesting shoots from the log (top of page 23), planting harvested shoots in a rooting medium ("vermiculite and perlite" of page 24, 2<sup>nd</sup> para.) in the presence of a rooting hormone (see "*The chemical treatments*" starting on page 23), and applying a fertilizer solution ("intermittent overhead mist" of 2<sup>nd</sup> para. of page 24) that comprises less than about 0.01% (w/v) nitrogen (in that mist is water which would contain less than about 0.01% (w/v) nitrogen), to the planted shoots in an amount effective to promote growth of the shoots (see abstract).

As to claim 14, Radwan et al. further disclose the Alder log being from a tree 5 to 9 years old ("younger trees (<7 years)" of page 22, last para.).

## Claim Rejections - 35 USC §103

The following is a quotation of 35 U.S.C. §103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, 6, 9, 15, and 16 are rejected under 35 U.S.C. §103(a) as being unpatentable over Radwan et al. (New Forests vol. 3; document 21 on Applicant's IDS received 7 May 2004).

As to claim 4, the limitations of Claim 1 are disclosed as described above. Not disclosed is the mist applied continuously. Examiner takes official notice that it is old and notoriously well known in the horticultural art to apply a mist continuously to seedlings. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Radwan et al. by misting continuously depending upon the physiologic needs of the seedlings.

As to claim 6, the limitations of Claim 3 are disclosed as described above. Not disclosed is the mist applied at 65 psi. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Radwan et al. by misting at 65 psi so as to supply the pressure needed to adequately mist the seedlings.

As to claim 9, the limitations of Claim 1 are disclosed as described above. Not disclosed is the fertilizer solution containing a vitamin. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Radwan et al. by adding a vitamin so as to meet the nutritional need of the seedlings.

As to claims 15 and 16, the limitations of Claim 1 are disclosed as described above. Not disclosed is the method used with Beech or Birch logs. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Radwan et al. by substituting Beech or Birch for Alder depending upon the species that is to be improved.

Claims 7-9 are rejected under 35 U.S.C. §103(a) as being unpatentable over Radwan et al. (New Forests vol. 3; document 21 on Applicant's IDS received 7 May 2004) in view of Huss-Danell (Physiol. Plant; document 10 on Applicant's IDS received 7 May 2004).

As to claims 7-9, the limitations of Claim 1 are disclosed as described above. Not disclosed is the fertilizer solution comprising K, P, and Cu. Huss-Danell, however, discloses a rooting fertilizer for alder with K, P, and Cu (page 114, 1<sup>st</sup> para.). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Radwan et al. by using the fertilizer solution of Huss-Danell so that the shoots have adequate nutrition to ensure healthy growth.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Jeffrey L. Gellner whose phone number is 703.305.0053 (after 4 April 2005 use: 571.272.6887). The Examiner can normally be reached Monday through Thursday from 8:30 am to 4:00 pm. The Examiner can also be reached on alternate Fridays.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Peter Poon, can be reached at 703.308.2574. The official fax telephone number for the Technology Center where this application or proceeding is assigned is 703.872.9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703.308.1113.
